

Task 1: Data Cleaning and Preprocessing

Objective

Clean and prepare the Mall Customer Segmentation dataset (from Kaggle) by handling missing values, duplicates, and inconsistent formatting.

Tools Used

Google Sheets

Dataset

Mall_Customers.csv — 200 rows, 5 columns (CustomerID, Gender, Age, Annual Income, Spending Score)

Steps Performed

1. Checked for missing values using COUNTA across all columns — none found.
2. Checked for duplicate rows using Remove Duplicates — none found, all 200 rows unique.
3. Renamed column headers to lowercase, no spaces: customerid, gender, age, annual_income, spending_score.
4. Verified Gender column for consistency (Male/Female only) using COUNTIF — confirmed 200/200 valid entries, no typos.
5. Confirmed correct data types — age, annual_income, and spending_score formatted as numbers.

Result

A fully cleaned dataset with no missing values, no duplicates, standardized headers, and consistent formatting — ready for analysis.
